# **SIGN COMPLIANCE** **SIGN PROJECTS** **SIGN MANAGEMENT**

Safety is the foundation of success for tank storage companies such as yours. There is growing demand for storage capacity, along with the challenge of not dropping the ball in terms of safety as a result of that growth. We understand your challenges and know that people will also always be looking for value for money. That is why our approach is always properly structured, based on your requirements for safety signage. We see safety signage as the first line of defence, a means of communication that focuses on letting the work at your terminal proceed as safely as possible.

# Durable marking for your pipes

Information carriers that last  
for years, on top of the legal  
requirements

Marking pipes carrying hazardous substances is prescribed by legislation and regulations. The primary purpose, though, is to raise the level of safety by providing correct and up-to-date information. Markings also help your terminal operate efficiently, by depicting information that helps operators and maintenance staff to recognize systems more quickly and prevent mistakes. Blomsma Signs & Safety handles complete pipeline marking projects in which you can rely on the durability of the markings applied. Our PolyesPro® pipeline marking is produced in line with the 3M™ requirements and applied by our 3M™ Certified Sign Installers.

# Visible where it's needed

Adjusted to the target group requirements

Tank signage and the information shown on it are aimed at various target groups. The reading distance and the positioning are essential factors for the recognisability. Emergency services need identification that is visible from a greater distance and that is located on the access routes. Tank markings can show the appropriate hazard symbols, the tank number and the storage capacity, as well as an NFPA marking and an identification number for the substance contained. Our engineers can help you set out the various criteria correctly that are important for marking your tanks - where, how and using what materials.

# Providing information systematically

Building safety signage as a system

A clear signage system is more effective and will be seen better. Your aim is to communicate a specific message at a specific place, contributing to safety. An excess of information can ruin the effectiveness of your signage. Blomsma Signs & Safety translates safety signage into a visual aspect of your safety policy and procedures.

**The overview gives a clear picture**  
Combine the legal requirements with clear impressions

An overview board by tank pits or other specific areas is an excellent solution for providing more insights and improving orientation. Combining information such as an overview of the hazardous substances stored and the explosion risk zones with process information can simplify your signage system as well as offering a way of communicating at a distance in a uniform language of comprehensible pictograms. Blomsma Signs & Safety can give advice or design and produce overview signs with a clear message.

# OUR SERVICES

## TPS - Total Project Service

Our Total Project Service starts with an inventory that is conducted by specialists with a vast amount of experience in the tank storage market. A site visit is made to determine what signage is needed and in what form and using which materials. We can create a comprehensible system of (composite) signage with a clear, harmonious and uniform appearance.

The inventory results are translated into sign plans by our draftsmen. A management system that is linked directly to the site drawings gives a clear picture of the costs of making and fitting the specified signage. Bundling all the plans together creates a sign manual that is the foundation for discussions with all parties involved, the definitive implementation and ultimately even a maintenance plan.

The TPS method lets Blomsma Signs & Safety guarantee that you will comply with current legislation and regulations at the moment the project is delivered.

## Sign manuals

We offer the option of ordering a 'sign package', with a desktop-engineered signage plan for worldwide delivery if so desired. A signage plan is developed, along with the installation and mounting instructions, derived from a safety plan that you deliver.

## In-house production

Thanks to the fact that we produce in-house, we are capable of delivering projects quickly and we can also offer tailored solutions. And thanks to the 3M™ production methods, you can rely on getting high-quality products with a long lifespan that can withstand the rigours of the weather.

## 3M™ Platinum Graphic Select Provider™

Blomsma is a 3M™ Platinum Graphic Select Provider™. That is the highest achievable level for suppliers in the signage market. This means that Blomsma Signs & Safety is allowed to provide guarantees independently on behalf of 3M™. These guarantees are given for the materials, the production and the assembly/mounting. What this means for you is the optimum project guarantee and complete certainty.
